

EXPERIENCE

IN THE PAST FIVE YEARS, PPD HAS CONDUCTED:

MORE THAN
100 cardiovascular trials
involving more than:

77,000 patients

7,600 sites

Across a broad range of indications including hypertension, myocardial infarction, venous thromboembolism, atrial flutter, embolism and thrombosis, and heart failure

11 cardiovascular outcomes studies,
involving more than:

50,000 patients

7,300 sites

In support of therapies designed to treat a variety of indications including Type 2 diabetes, acute coronary syndrome and obesity

PPD HAS EXPERIENCE
WORKING ON CV
STUDIES OF ALL SIZES

From single-site dose
exploration studies

To global mega-trials with
hundreds of sites and thousands
of patients
